Automation software based on Python, The software is built using PyQt framework, It supports all the object-oriented tools as well as embedded Perl library, The application includes an XML editor which allows editing the XML file of the project. The software application allows you to save the project in the embedded XML. Efficient and easy to use, the application is small in size and easy to install. The software application provides a table with a list of functions to configure the application. The software application supports all the Windows version of the operating system. The software application can also be used on the Android platform. The software application supports all the devices for which the Microsoft Office productivity software is available. Fully licensed. 2.3 2016-01-18 947 downloads IronPython Editor for code formatting IronPython Editor for code formatting allows you to format the code using the Snippets. The text can be formatted using the Snippets panel which appears when you right-click on the code. These Snippets will be generated automatically and you do not have to worry about it. All you need to do is right-click on the code and select the Snippet that you want. You can format the code using a combination of syntax highlighting and indenting. With this tool, you do not have to switch back and forth from the code and the code editor for formatting the code. Each Snippet can be customized using the options panel which appears when you right-click on the code. You can also select the option to format the code using the regular expressions. There are many useful functions that can be found in the tool such as formatting using regular expressions, word wrapping, etc. Text is provided which helps you to understand the regular expressions. Snippets are stored in the XML file. Each Snippet is stored as an XML tag. The Snippets are also embedded in the source code so that they can be easily used. 82157476af
